

CHRISTOPHER OJEDAYO

Cloud & DevOps Engineer

ojedayochristopher@gmail.com | +234 816 822 8747 | Lagos, Nigeria | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Cloud and DevOps Engineer with production experience delivering end-to-end infrastructure on AWS and Azure. Delivered two complete platform deployments from scratch: a Node.js/React application on AWS ECS Fargate and a PHP application on Azure AKS, both with live TLS, CI/CD pipelines, Prometheus/Grafana observability, and full architectural documentation. Writes modular Terraform, builds multi-stage GitHub Actions pipelines, and operates Kubernetes clusters in production. Experienced resolving novel infrastructure constraints, including ISP-level connectivity failures through Kubernetes-native solutions.

CORE COMPETENCIES

- **Cloud Platforms:** AWS (ECS Fargate, ECR, ALB, RDS, ElastiCache, Secrets Manager, CloudWatch, ACM, VPC), Azure (AKS, ACR, VMs, VNet, NSG, Load Balancer, Key Vault, Storage)
- **Containers & Orchestration:** Kubernetes (AKS, EKS), Docker, Helm, ECS Fargate, NGINX Ingress, cert-manager, HPA autoscaling, StatefulSets
- **IaC & Automation:** Terraform (modular, remote state), Ansible, Bash scripting, Python automation
- **CI/CD:** GitHub Actions, Docker multi-stage builds, ECR & ACR image management, rolling deployments, automatic rollback, Trivy security scanning
- **Observability:** Prometheus, Grafana, CloudWatch Container Insights, custom dashboards and alerting, performance tuning
- **Security:** IAM & RBAC, AWS Secrets Manager, Azure Key Vault, TLS & cert-manager, least-privilege design, Trivy container scanning, network segmentation
- **Networking:** VPC & VNet design, subnet isolation, NAT Gateway, Cloudflare Tunnel, DNS & CDN, ALB-only ingress
- **Languages & Databases:** Python, Bash, Node.js, TypeScript, Go, YAML — MySQL (RDS, StatefulSet), Redis (ElastiCache), PostgreSQL

PROFESSIONAL EXPERIENCE

Cloud & DevOps Engineer *June 2024 – Present*

Hagital Consulting · Remote, Nigeria

- Delivered two end-to-end production cloud deployments from zero infrastructure: a PHP tooling app on Azure AKS and a Node.js/React app on AWS ECS Fargate, both with HTTPS, observability, CI/CD, and full architectural documentation.
- Built 4-stage GitHub Actions CI/CD pipelines with Jest testing against live MySQL/Redis containers, Docker multi-stage builds, Trivy security scanning, and rolling deploys with automatic rollback on failure.
- Provisioned all infrastructure using modular Terraform with remote state across 7 modules (VPC, ALB, ECS, RDS, ElastiCache, IAM, ECR), reducing provisioning time by 60%+.
- Deployed and operated Kubernetes clusters on AKS with NGINX Ingress, cert-manager DNS-01 TLS via Cloudflare API, Helm charts, HPA autoscaling, and MySQL StatefulSets.
- Built Prometheus/Grafana observability stacks with custom dashboards and alerting, enabling proactive identification of performance bottlenecks before they impact users.
- Implemented defence-in-depth security: least-privilege IAM per service, all secrets in AWS Secrets Manager and Azure Key Vault, TLS at every layer, zero credentials in source code or CI/CD.
- Designed three-tier VPC on AWS with ECS tasks in private subnets, ALB-only ingress, and NAT Gateway for controlled outbound access.

Co-Founder & Operations Manager *May 2023 – May 2024*

Hocia Limited (Recycling Enterprise) · Abuja

- Founded and scaled a recycling operation managing a 47-person team, building operational systems, workflows, and cost controls from scratch in a resource-constrained environment.

WordPress Developer & Digital Marketer *Oct 2018 – May 2023*

- Designed and maintained production WordPress sites for business clients, managing hosting, domains, SSL, performance, and uptime.

KEY PORTFOLIO PROJECTS (LIVE / PRODUCTION DEPLOYMENTS)

Two flagship production deployments, fully documented with architecture diagrams and troubleshooting journals — happy to walk through either build live:

- **FeedbackHQ — AWS Full-Stack Production Deployment** · github.com/kristarking/feedbackhq

Stack: AWS ECS Fargate · RDS MySQL · ElastiCache Redis · ALB · Terraform · GitHub Actions · Docker · Node.js · React · Secrets Manager · CloudWatch · ACM

Three-tier Node.js/React application on AWS ECS Fargate. Modular Terraform across 7 modules, 4-stage GitHub Actions pipeline with Jest tests, Docker multi-stage builds, Trivy scanning, and rolling ECS deploys with circuit-breaker rollback. AWS Secrets Manager for all credentials. CloudWatch Container Insights for observability. Full architecture diagram and deployment guide in the README.

- **Tooling Web App — Azure AKS Production Deployment** · github.com/kristarking/tooling-project

Stack: Azure AKS · ACR · Terraform · GitHub Actions · Helm · cert-manager · Cloudflare Tunnel · Prometheus · Grafana · MySQL StatefulSet

PHP application on Azure AKS with Terraform, GitHub Actions CI/CD, cert-manager DNS-01 TLS, and Prometheus/Grafana monitoring. Resolved ISP-level Azure IP blocking by deploying a Cloudflare Tunnel as a Kubernetes workload. Documented as an ADR with full troubleshooting journal.

EDUCATION

Bachelor of Arts, Performing Arts — University of Ilorin, Nigeria (Graduated 2018)

CERTIFICATIONS & ADDITIONAL STRENGTHS

- Microsoft Azure Administrator Associate (AZ-104) — In Progress
- Technical content creator on TikTok and YouTube (@kristarking) and Dev.to/kristarking, producing DevOps tutorials for the African tech community.
